

Name: _____

Date: _____

Jungle Value Race

Welcome to the Jungle Value Race! You need to track the massive animal populations deep in the forest. To follow the correct path to the finish line, compare the population numbers using $<$ (less than), $>$ (greater than), or $=$ (equal to).

Path 1: The Direct Trail

1. Compare the total numbers of these jungle animals. Write $<$, $>$, or $=$ in the empty box to move forward.

Tree Frogs

452,189

Jungle Beetles

452,198

Wild Parrots

120,500

Macaque Monkeys

102,500

Monsoon Butterflies

899,999

River Fish

900,000

Fireflies

634,210

Leaf Ants

634,210

Path 2: The Hidden Numbers River

2. Some explorer notes got smudged! You must compare numbers written in expanded form or word form to cross the river.

Seven hundred fifty thousand

705,000

$300,000 + 40,000 + 5,000 + 200 + 10 + 9$

345,291

99,999

One hundred thousand

$500,000 + 60,000 + 800$

560,800

Path 3: Face Value vs. Place Value Bridge

3. Be careful on the bridge! Remember that **face value** is just the digit itself, but **place value** is how much that digit is actually worth based on its spot.

Write $<$, $>$, or $=$ to compare the values described below.

The **place value** of 4 in
341,000

The **place value** of 4 in
104,200

The **face value** of 9 in 921,000

The **face value** of 7 in 170,000

The **place value** of 6 in
600,000

10 times greater than 60,000

Path 4: The Final Line-Up

4. To unlock the finish line gates, you must arrange these four insect populations in order from **greatest to least**.

Spiders	Centipedes	Dragonflies	Cicadas
812,450	821,004	812,540	82,104

Write the populations in order from greatest to least:
